1 Near-Field Communication Applications

my phone doesn't have NFC chip on it..

1 NFC Availability

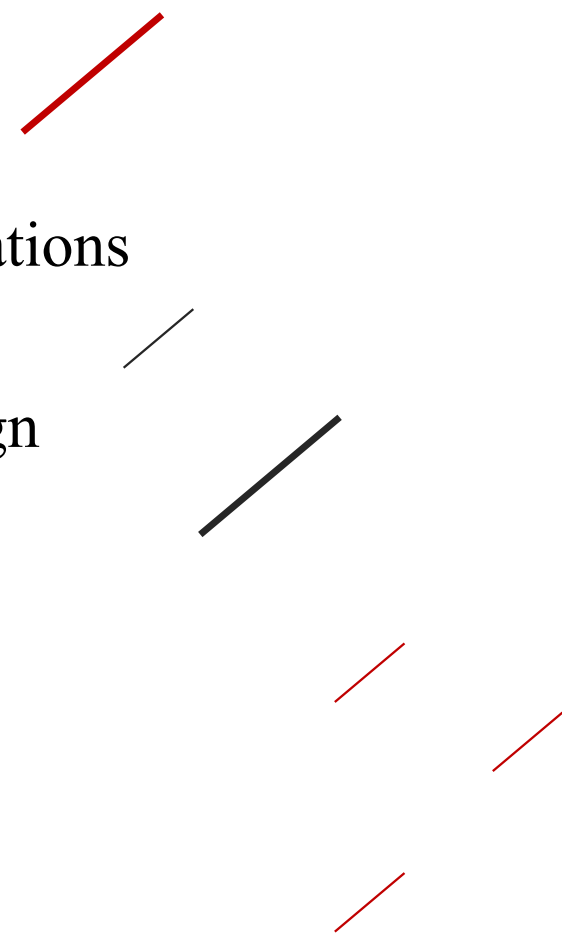

NFC will be included in **64%** of the mobile phones in 2018.
Still **675 million** phones have no NFC.

OUTLINE

- 
- [1] Motivation
 - [2] Key Idea and Applications
 - [3] Challenges and Design
 - [4] Prototypes
 - [5] Evaluation
 - [6] Conclusion

2

PART

Key Idea and Applications

Magnetic Induction (MI) Signals 2

CPU

fans

(a) CPU.

(b) Fan.

Use MI signals to Transmit Data? 2

1 0 0 1 1

3 PART

A cluster of five small triangles in light red, dark red, and dark grey, arranged in a circular pattern around the number 3.

Challenges and Design

Four diagonal lines in black and red, positioned around the text 'Challenges and Design'.

[3 Challenges

How to modulate
CPU MI signals?

1

2

How to handle the
user's interference?

How to enhance the
transmission speed?

3

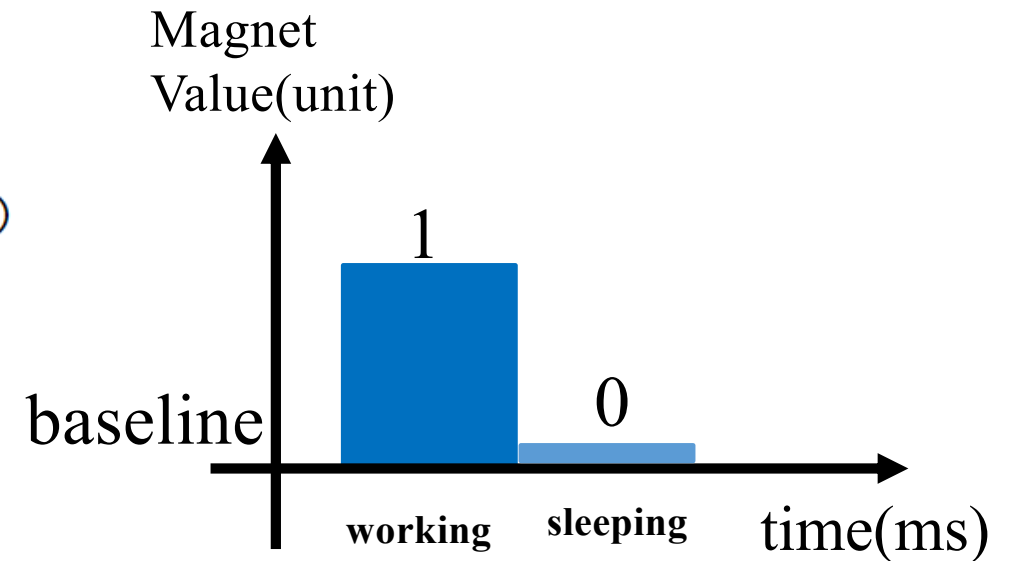

4

How to implement the
full-duplex communication?

3-1 Generating Desired MI Signals

```
1  /* ---working---*/
2
3  def working(interval):
4  {
5      while true
6      {
7          if((time.time() - starttime)
8              > interval ):
9              break
10     }
11 }
```

```
1  /* ---sleeping---*/
2
3  def sleeping(interval):
4  {
5      time.sleep(interval)
6  }
```

3-1 Modulation

PWM: Changing Width, $M = 2$

PAM: Changing Amplitude, $N = 2$

PWAM: Changing Width & Amplitude

[3 Challenges

How to modulate
CPU MI signals?

1

2

How to handle the
user's interference?

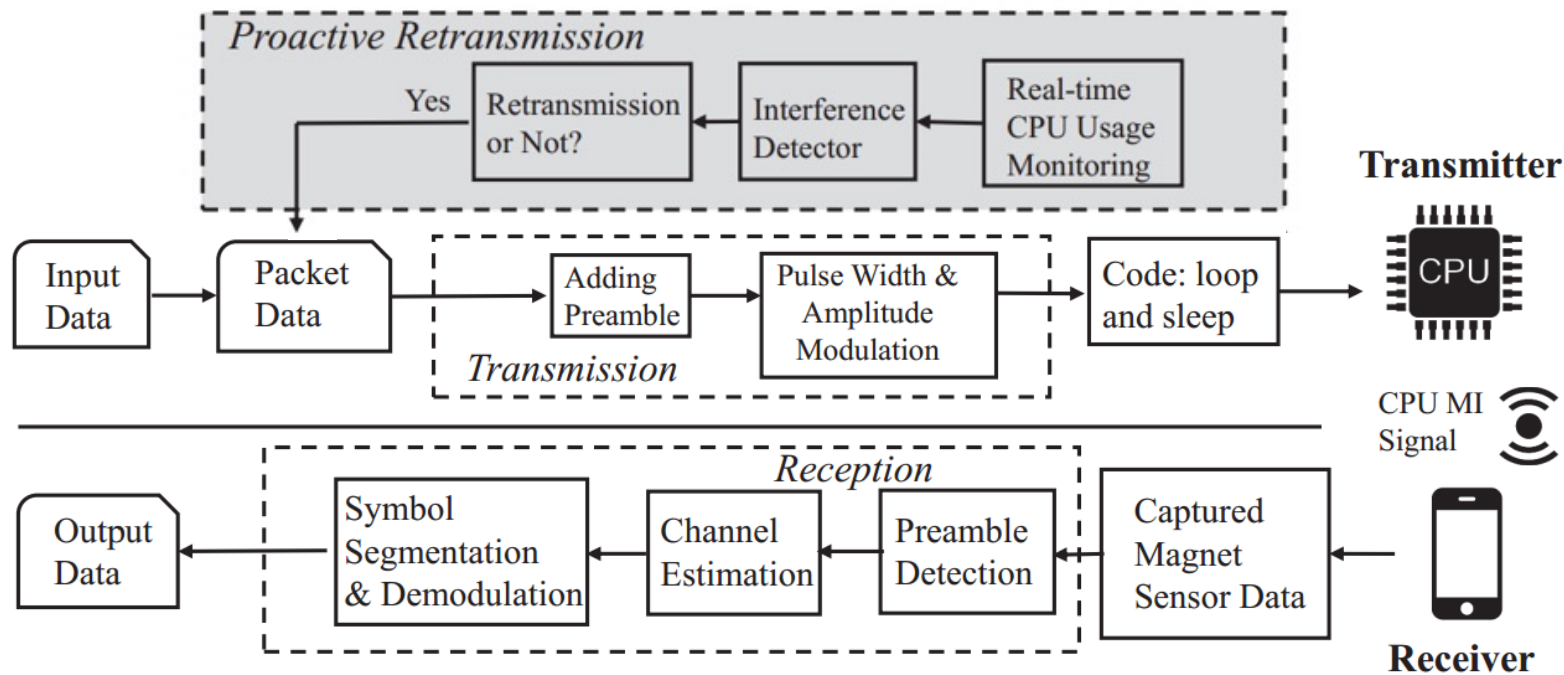

How to enhance the
transmission speed?

3

4

How to implement the
full-duplex communication?

3-2 Work Flow

3-2 Retransmission Mechanism

[3 Challenges

How to modulate
CPU MI signals?

1

2

How to handle the
user's interference?

How to enhance the
transmission speed?

3

4

How to implement the
full-duplex communication?

Transmitter I

Transmitter II

Multiple Transmitters 3-3

MI Signals with Multiple TXs

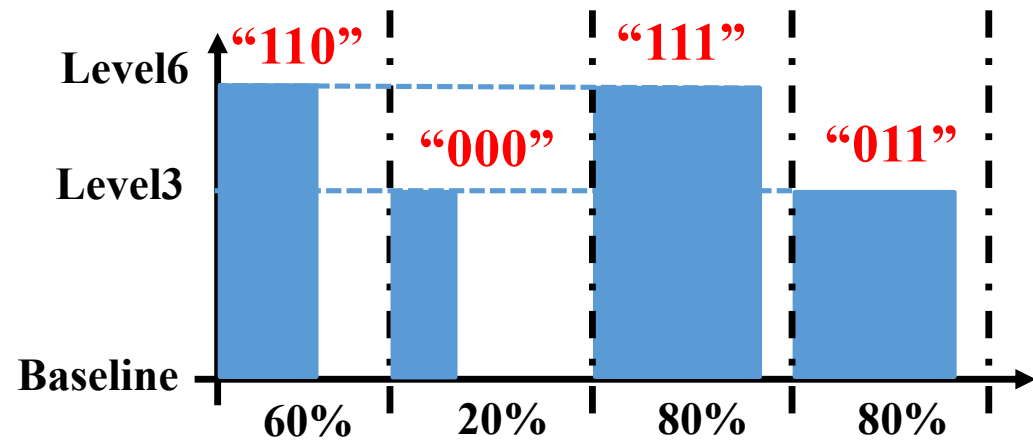

Separating Signals From Transmitters 3-3

Rules Table:

0 = 0+0	3 = 3+0	6 = 6+0
1 = 0+1	4 = 3+1	7 = 6+1
2 = 0+2	5 = 3+2	8 = 6+2

[**3** Challenges

How to modulate
CPU MI signals?

1

2

How to handle the
user's interference?

How to enhance the
transmission speed?

3

4

How to implement the
full-duplex communication?

Full-Duplex Communication 3-4

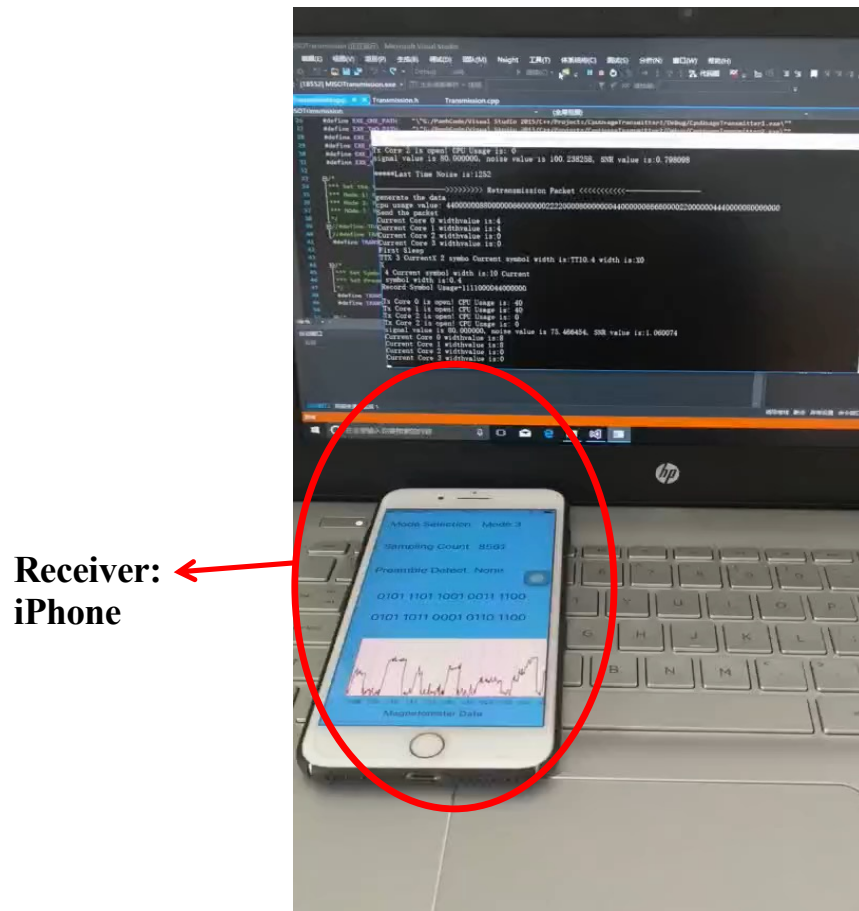

4 PART

A decorative graphic consisting of several triangles in shades of red, black, and grey, arranged in a cluster around the number 4.

MagneComm Prototypes

A decorative graphic consisting of several thin lines in black and red, arranged in a cluster around the text MagneComm Prototypes.

4 Two Prototypes

Transmitter:
CPU cores

Receiver:
Magnet sensor

5

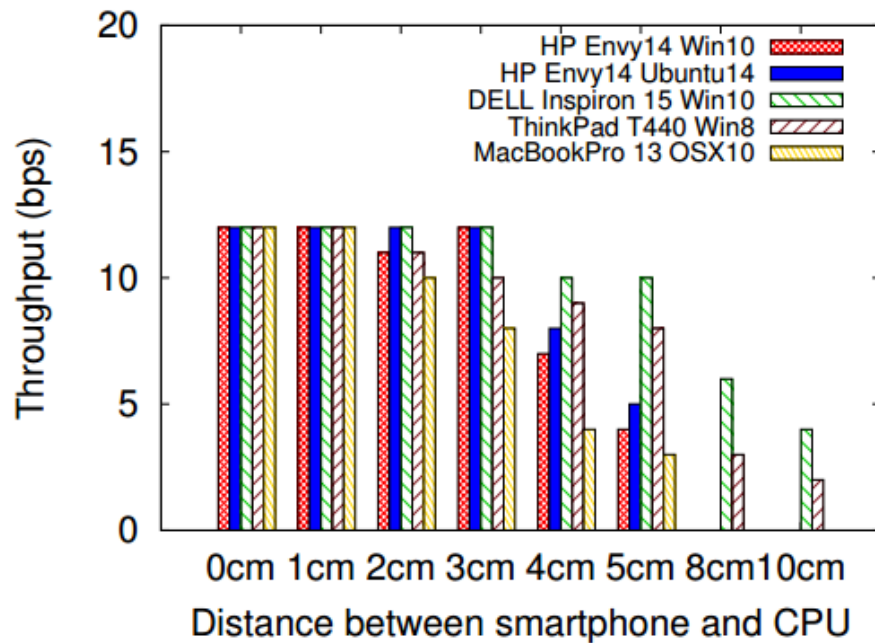

A cluster of five small triangles in light red, dark red, and dark grey, arranged in a circular pattern around the base of the number 5.

PART

Four diagonal lines in black and red, positioned around the word Performance: one black line above and to the left, one red line above and to the right, one black line below and to the left, and one red line below and to the right.

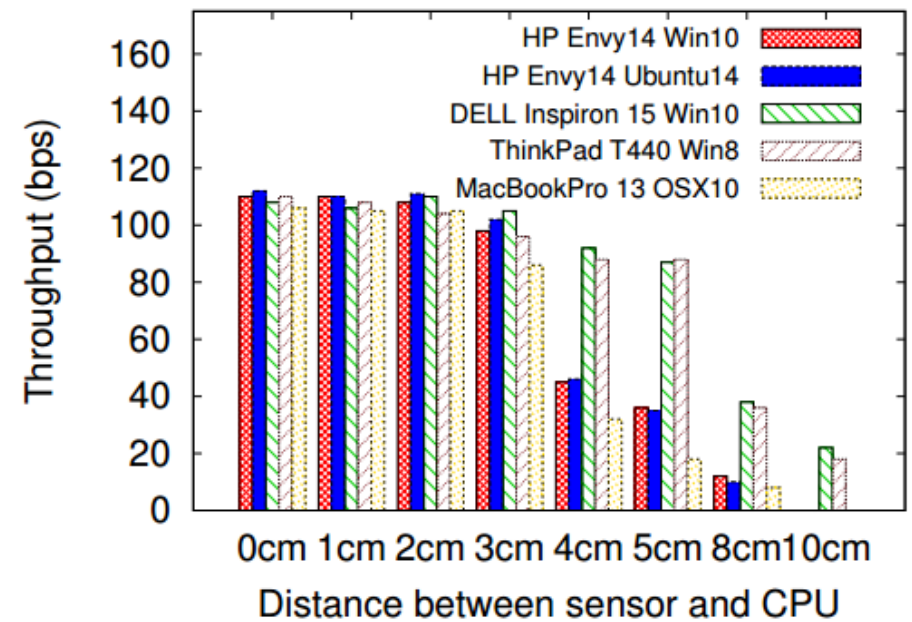

Performance

One-Way Communication 5

(a) Prototype I: throughput vs. distances.

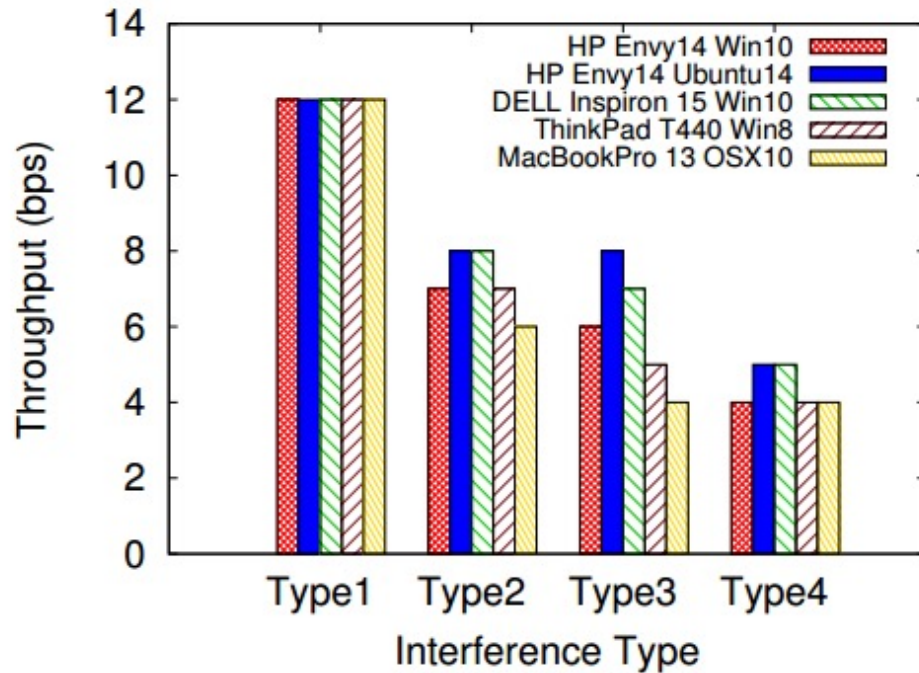

$T = 300\text{ms}$, $M=2$, $N=2$

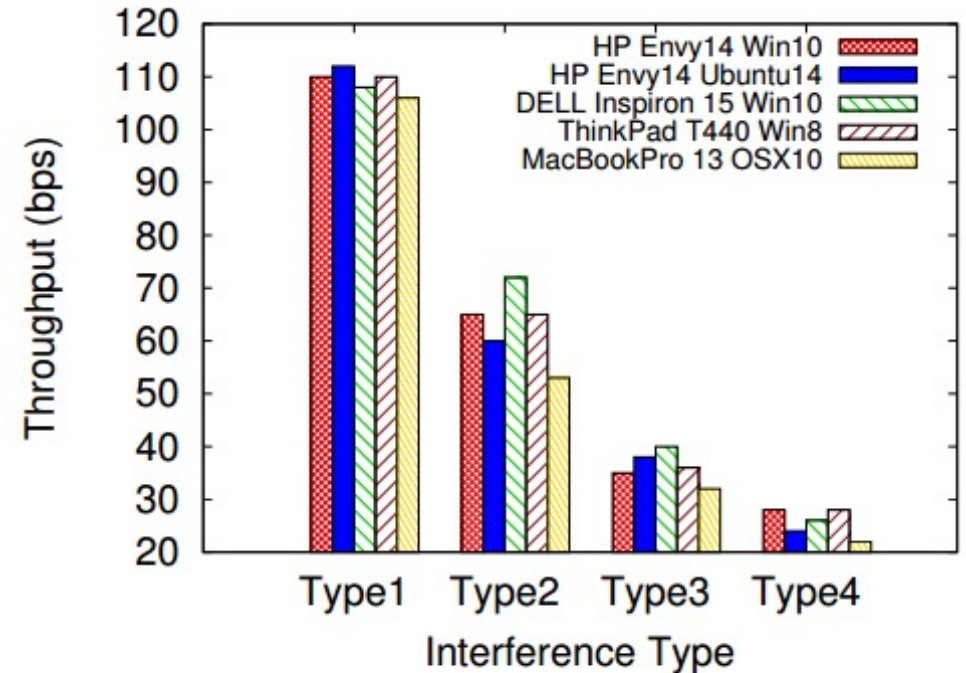

(b) Prototype II: throughput vs. distances.

$T = 30\text{ms}$, $M=2$, $N=2$

Impact of Interference 5

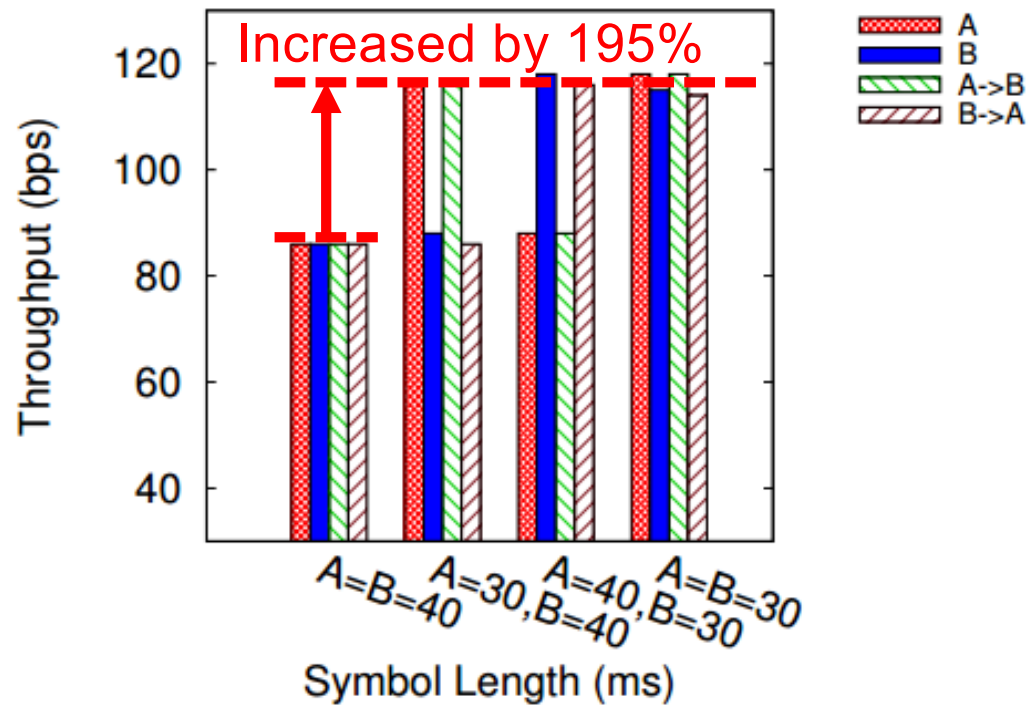

(a) Prototype I: throughput vs. scenarios.

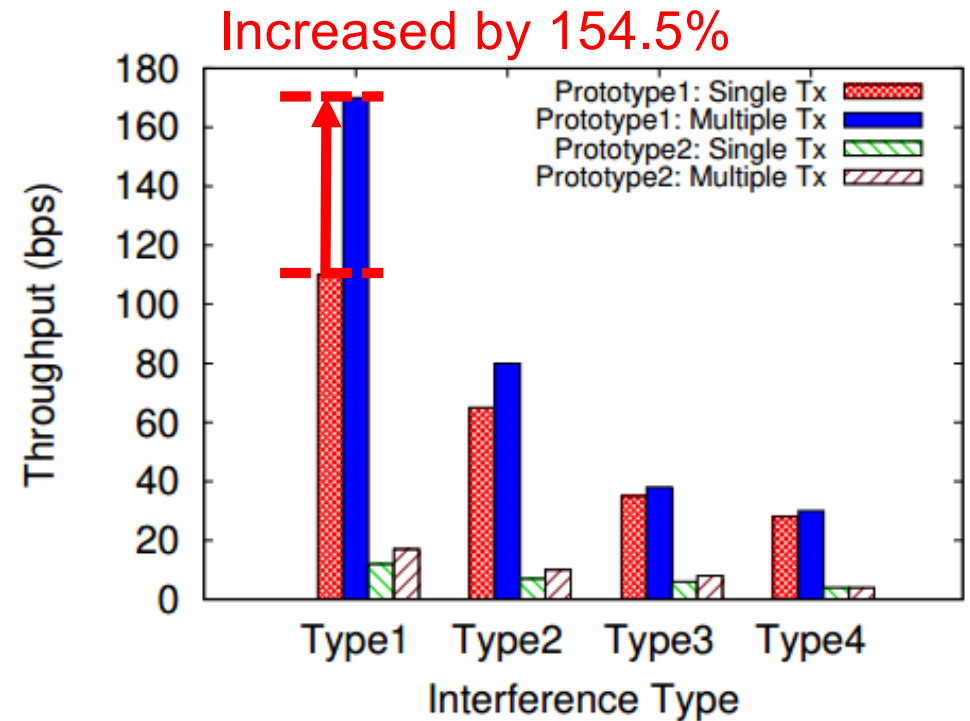

(b) Prototype II: throughput vs. scenarios.

Type1 = doing nothing, Type2 = watching live video,
Type3 = surfing websites, Type4 = playing games

Full Duplex & Multiple Transmitters 5

$$M_A = M_B = 2, N_A = N_B = 2$$

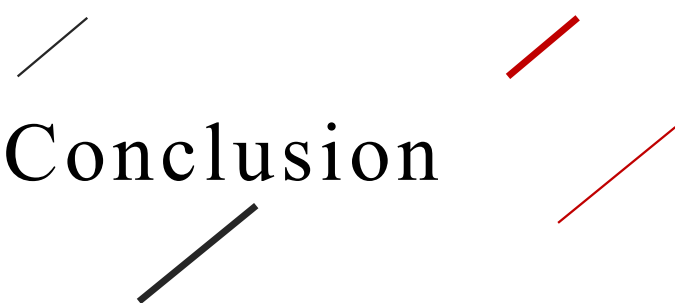

Type1 = doing nothing, Type2 = watching live video,
Type3 = surfing websites, Type4 = playing games

6

PART

Conclusion

- ***MagneComm***

- Explore the possibility of a novel near-field communication using Magnetic Induction signals.
- Use CPU and magnetometer as sender and receiver
 - No additional hardware is required.
- Compensate existing NFC technologies with additional bandwidth

A decorative graphic featuring a central white rectangle with a thin black border. Above the rectangle are four triangles: a large light red one, a small black one, a medium red one, and a small grey one. To the left of the rectangle are two parallel black diagonal lines. To the right are two parallel red diagonal lines. The word "THANKS" is centered within the rectangle.

THANKS
